TS1 & DIAG H1+ & CONFIG H2
For TS1:
All are available in PassLeader 400-101 Lab practice tests/braindumps, easy to answer. (p.s. 2 points*1+4 points*2)
For DIAG H1+:
Same as PassLeader 400-101 Lab practice tests/braindumps, BUT pay attention to "Ports Name", there may be changed in the topology.
For CONFIG H2:
1. VTP was preconfigured and unused port on VLAN 999 shutdown.
2. OSPF: SW1, SW2 and R1 must be DR and R2 BDR.
3. EIGRP must be converted to named mode ... need to delete CONFIG and do new one.
4. CONFIG Route-Tag and do redistribution on R9 and R10 with route-map METRIC.
5. BGP between CE was PRE-CONFIGed and also on R17. Be careful of Router-ID missed in some routers.
6. BGP neighboring command towards CEs was PRE-CONFIGed on PEs. You should delete it and do it under address family.
7. Aggregation was PRE-CONFIGed under R55 and R56.
8. EIGRP & BGP were PRE-CONFIGed on R55 and R56.
9. VRF GREEN with bad RD and RT parameters was PRE-CONFIGed on R51. You should delete it and create new one with right RD.
......
Almost all topics are from PassLeader 400-101 LAB practice tests/braindumps.
All in all, highly recommend PassLeader 400-101 LAB practice tests/braindumps for your CCIE R&S 400-101 Lab preparation (The price of PassLeader is perfect compared with others')!
